Summary

Final-year Information Science Engineering student with strong Data Structures and Algorithms fundamentals and hands-on experience building full-stack web applications with the MERN stack and Django. Skilled in React.js, Node.js, Express.js, MongoDB, REST APIs and authentication, with a focus on building scalable web solutions.

Education

PES College of Engineering (PESCE), Mandya **2023 – 2027**
B.E. in Information Science & Engineering CGPA: 8.42
Relevant Coursework: Data Structures and Algorithms, Object-Oriented Programming, Operating Systems, DBMS, Computer Networks

G.B.H.S.S., Jammu **2022 – 2023**
Senior Secondary (Class XII) Percentage: 87.8%

Technical Skills

Languages: C, C++, JavaScript, SQL
Frontend: React.js, HTML5, CSS3
Backend & APIs: Node.js, Express.js, Django, RESTful API Design, JWT Authentication, Role-Based Access Control
Databases: MongoDB, MySQL
Tools & Deployment: Git, GitHub, Postman, Vercel
Core Subjects: Data Structures and Algorithms, OOP, Operating Systems, DBMS, Computer Networks

Projects

AlgoMentor – Adaptive Coding Mentor Platform [GitHub] | [Live Demo]
React.js, Node.js, Express.js, MongoDB

- Architected a five-engine adaptive backend (weakness detection, topic unlock, practice, roadmap, spaced revision) that turns a user's solve history into a personalized study plan; each engine has its own MongoDB schema and REST API.
- Unified data from 4 platforms (LeetCode, Codeforces, CodeChef, GeeksforGeeks) into a single normalized profile, replacing manual tracking across four dashboards with one real-time view of strengths and weak topics.
- Built a **JWT**-secured React dashboard showing live progress, topic-wise roadmaps, and revision schedules; deployed on Vercel.

MediSlot – Smart Health Center Appointment System [GitHub] | [Live Demo]
React.js, Node.js, Express.js, MongoDB

- Built a full-stack appointment booking platform where patients book doctor slots using React, Node.js, Express, and MongoDB.
- Implemented **JWT** authentication and **Role-Based Access Control** for patient, doctor, and admin roles, with server-side payment verification to secure transactions.
- Designed **REST APIs** and MongoDB schemas for doctors, patients, and appointments, with slot-conflict handling so two patients cannot book the same slot.

E-Commerce Platform – Full Stack Web Application [GitHub]
React.js, Django

- Built a **Django REST** backend and React.js frontend handling cart, wishlist, and order-management workflows with persistent session state.
- Structured the backend into modular Django apps with normalized database models for scalable, maintainable feature growth.
- Implemented authentication and **Role-Based Access Control** to secure routes and restrict admin-level product management to authorized users.

Achievements

- Won a hackathon organized at the college level.
- Solved **300+** DSA problems across LeetCode, GeeksforGeeks, CodeChef, HackerRank, and Codeforces.
- Cleared the technical round of HackWithInfy, a national-level coding competition conducted across India.
